

Optimize your network environment

Expertise: Enterprise Networking

Wireless networking

As end-users and devices accessing a network increase, managing a network becomes a more important and complex responsibility. Complexities also increase when you have to traverse large distances for WAN configurations, are coordinating it with other business initiatives, or are operating in older buildings not designed for WiFi.

We leverage a team equipped to handle a diverse set of network requirements and conditions, such as wired/wireless network environments and networks that need to support high capacity storage, VoIP, VDI, SSO and a wide range of applications. We're also experts at aligning networks with IT transformations, which may include data center retrofits, cloud configurations, and new application installs or migrations.

IT environment assessments for wireless networks

A network assessment is the first step you'll need to take when considering changes, and an assessment may also be necessary to identify unnoticed issues. Services we provide during a network assessment can include an inventory and analysis of current devices, a review of network architecture, an evaluation of your network's performance, and a security and compliance analysis.

Our proven assessment methodology focuses on identifying risks and providing actionable recommendations that support overall business objectives. We base our assessments off of industry-best practices and are often brought on to see the entirety of IT projects once an assessment is completed.

Key benefits

- Streamlined, scalable and secure networks
- End-to-end intelligence for better performance
- Vendor neutrality for the best solutions at the best value
- Comprehensive knowledge to facilitate all project phases
- Consolidated IT services for simpler maintenance

Expertise: Enterprise Networking

Vendor management

From the beginning of negotiations, we can help you define objectives and develop a clear agenda, which reduces the chance of devoting resources to extra, unneeded products. We can also help you build a team to oversee vendor negotiations, and we can help efficiently evaluate vendor offerings and negotiate better agreements.

Network design and implementation

Using a project management methodology that incorporates PMI techniques for upfront planning and agility for execution, we can provide a roadmap, adapt if issues arise, and guide you in designing and installing a new network.

During planning and design, we leverage subject matter experts and experienced project managers to create a comprehensive network architecture that aligns with core business objectives. We also involve stakeholders through deliverable presentations and constantly adapt team processes to increase efficiency throughout the course of an entire initiative.

When it comes time to implement, we can help you integrate new solutions into workflows by providing employee knowledge transfer and post-implementation support. By working closely with IT teams and end-users at this stage, we can facilitate more efficient maintenance and improved business operations.

Wireless networking in healthcare

Whether you need to reduce the wire closets across your LAN, are building a new facility, or need to sync offsite EHR data with onsite operations, we can help you from assessment and planning to deployment and post implementation support.

Our executive leaders with healthcare CIO experience along with our project managers and clinical application and technical specialists can coordinate strategies that align your wireless network with overall organizational strategies. We can also work closely with clinical and technical teams to ensure workflows are optimized, systems can be maintained efficiently and care quality improves.

We've worked with a number of highly regarded healthcare providers. Organizations we've planned and/or implemented complex network infrastructure projects for include Children's Hospital Los Angeles, Saint John's Health Center and Comanche County Memorial Hospital.

About T2 Tech Group

T2 Tech Group is a premier provider of vendor agnostic technology consulting. With the ability to see projects from assessment to post implementation, we strengthen client organizations by leveraging an experienced team, balancing business and IT, providing unbiased solutions, practicing transparency and using a proven methodology.
