

T2 Tech Group uses a strategic enterprise approach to reduce costs and provide high-quality IT Architecture.

## Expertise: Finance and Operations

### The growth and complexities of IT

Today's enterprise technology needs require complex environments that typically handle a wide variety of applications running on distinct types of platforms. There's an increasing requirement to drive efficiencies by streamlining cost and changing how staff spend their time. In the face of these requirements, IT managers are challenged by constrained budgets even though they still must continue to deliver on increasingly stringent service level agreements, build new applications, and maintain high levels of application availability.

The issue of IT efficiency and agility is even more critical as more business units rely on tight integration with IT, and it is imperative that organizations are able to collaborate between organizational parties and multiple mediums of IT.

### Services for operational and financial improvements

To answer the IT needs of a wide variety of industries, T2 Tech Group™ can enable an affordable IT architecture that facilitates high-quality service levels and operational efficiencies.

Some of the ways T2 Tech improves IT service levels and reduces costs include providing IT assessments, revising operations management, managing staff, aiding in vendor negotiation, increasing scalability, renovating poorly integrated systems, and/or implementing IT architecture.

When providing IT services, we can oversee a project from start to finish, and our experienced personnel interact well at the CEO and CFO levels, strategically align IT objectives to match organizational goals and finally, implement solutions on time and within budget.

### Key benefits

- Increase efficiencies in IT operational process and staffing
- Improve service levels of IT groups
- Negotiate or renegotiate vendor agreements for optimal partnerships
- Consolidate and simplify IT services across organizations and technology platforms

# Expertise: Finance and Operations

## Negotiations to build optimal partnerships

In addition to being involved in the organizational planning, designing and implementation of projects, T2 Tech is also vendor agnostic and negotiates with vendors at the enterprise level to provide cost saving and create cash flow schedules to meet financial requirements.

When working with vendors, T2 Tech helps better define vendor deliverables and service-level agreements. With our clients and partners, we make sure agreements are upheld and look at operational processes and staffing levels to improve the quality of services and create efficiencies.

## Value-driven benefits

Vendor negotiations have saved clients millions of dollars and have made projects more feasible by drastically reducing capital costs.

T2 Tech Group has also improved service levels of IT groups; integrated multiple platforms, such as network servers, storage systems, and security systems; and coordinated teams to better utilize time and reduce full-time employees.

T2 Tech is uniquely able to improve systems because of its vendor neutrality and its strategic enterprise approach that takes on projects from start to finish. Due to its complete approach, the solutions that T2 Tech designs and implements are both practical and cost effective.
